

Minh-An TRAN

Backend-Oriented Software Developer – .NET Core / Azure

📞 Available on request ✉ contact@minhan-tran.fr 🌐 minhan-tran.fr 📍 Lyon, France

◆ SUMMARY

Backend developer with 5+ years building reliable .NET and PL/SQL services for customs software, and the author of two Shopify apps published on the App Store. I design clean APIs, optimize database-heavy workloads, and ship with CI/CD on Azure while keeping systems observable and maintainable. On my own products I carry the whole chain end-to-end — domain modeling, OAuth and billing, webhooks, containerized deployment, GDPR compliance and production support.

◆ WORK EXPERIENCE

○ Backend Developer

AKANEA Développement · Lyon, France · 2018 – Present

Building and maintaining .NET and PL/SQL backend services for customs software within AKANEA's Customs business unit.

.NET Core

C#

PL/SQL

Oracle

Azure

MQTT

Git

- Design and ship .NET Core backend services and REST APIs at the heart of AKANEA's customs software.
- Optimize PL/SQL routines on Oracle for high-volume transactional workloads, from profiling to query tuning.
- Run deployments on Azure — virtual machines and CI/CD pipelines — from build to production.
- Contribute across the full lifecycle in an Agile/Scrum team, from domain design to production support.

◆ SKILLS

PROGRAMMING LANGUAGES

C# SQL (PL/SQL)

BACKEND & FRAMEWORKS

.NET / .NET Core ASP.NET Core Entity Framework Core Blazor WinForms REST APIs

FRONTEND

React TypeScript Vite

DATABASES

Oracle SQL Server Behavior-Driven Development

CLOUD & DEVOPS

Azure (VM, App Services) CI/CD Docker Cloudflare Tunnel

INTEGRATION

MQTT / Mosquitto message queues gRPC

SHOPIFY PLATFORM

Embedded apps (OAuth, token exchange) App Bridge Polaris Theme App Extensions
App Proxy Shopify Billing GraphQL Admin API Webhooks

METHODS & TOOLS

Git GitLab Agile unit testing

◆ PROJECTS

Facturette — Shopify app for French e-invoicing

[Shopify App Store](#)

A published Shopify app that turns every paid order into a legally compliant Factur-X invoice — a PDF/A-3 document carrying the EN 16931 CII XML inside it — and, on the paid tier, files B2B invoices to the merchant's certified platform (Plateforme Agréée). Built in .NET 10 / ASP.NET Core on Oracle with EF Core, shipped as a Docker container behind a Cloudflare Tunnel, with OAuth, Shopify Billing, GDPR webhooks and App Store review.

BackInStock — Shopify app for restock alerts

[Shopify App Store](#)

A published Shopify app that lets shoppers subscribe to a sold-out variant and emails them the moment it returns. .NET 10 backend with EF Core on Oracle, a React + Polaris admin, and a Theme App Extension widget merchants drop in from the theme editor. Inventory webhooks feed an asynchronous email queue with configurable delay, business-hours windows and stock thresholds.

Argent — Personal Finance PWA

[GitHub project](#)

An offline-first Progressive Web App for personal finance: data stays 100% on-device (IndexedDB / Dexie), with no server or account, plus optional backup to your own Google Drive. Built with React 18, TypeScript and Vite — bilingual EN/FR and multi-currency.

Cryptocurrency Trading Bot

[GitLab project](#)

A cryptocurrency trading bot in .NET Core using Oracle BDD for decision-making. Hosted and maintained on an Azure VM for high availability, with Mosquitto (MQTT) for real-time data analysis.

This Resume

[GitHub project](#)

An open-source, ATS-friendly, bilingual resume with automated PDF generation.
